DETAILED ACTION

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-11, 13-23 and 25-35 are drawn to a first step of performing an image processing for performing points in each image of the first image and the second image to a curved pattern and the linear components in each image to a plurality of overlapped curved-patterns, based on a distance from a reference position to a shortest point in a straight line passing through a point in the image and an angle between a straight line passing through the reference position and the shortest point and a reference axis including the reference position, and generating a first transformed image and a second transformed image, classified in class 382, subclass 209.
 - II. Claims 12, 24 and 36 are drawn to a first step of performing a Hough transform processing to the first image and the second image to generate a first transform image and a second transform image, classified in class 382, subclass 281.
2. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination I has separate utility such as a first step of performing an image processing for performing points in each image of the first image and the second image to a curved pattern and the linear components in

each image to a plurality of overlapped curved-patterns, based on a distance from a reference position to a shortest point in a straight line passing through a point in the image and an angle between a straight line passing through the reference position and the shortest point and a reference axis including the reference position, and generating a first transformed image and a second transformed image. Subcombination II has separate utility such as a first step of performing a Hough transform processing to the first image and the second image to generate a first transform image and a second transform image. See MPEP § 806.05(d).

The examiner has required restriction between subcombinations usable together. Where applicant elects a subcombination and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.
